

ROTOR CONSTRUCTION
BR900372: 2005-2008 Cadillac STS

Non-Directional swirl finish eliminating the need for machining prior to installation

Precise hub hole chamfer ensures a hub centric fit

Castings engineered to high metallurgical standards for consistent quality, strength and performance

Unique vane designs on many late model rotors. An example of this is the Dura International part number BR900372

Multiple vane configurations force out hot air and pull in cool air for suitable heat dissipation and improved performance

Dura International takes great pride in the quality of its products. Over the past 15 years, we have sold over 40 million brake rotors and have earned a reputation for providing products of outstanding quality, safety and reliability at affordable prices.

FIRST TO MARKET

- Over 200 new and late model “part numbers” introduced since 2008.
- New numbers are priced at value line prices from the date of introduction.
- When introduced, first to market applications are both cataloged and available.
- Expansive value line includes the most late model applications available.
- All new part numbers are introduced with price and availability (no TBA's).

PROVEN QUALITY

- Over 15 years of proven quality at affordable prices.
- Committed to a full value line of rotors, no second tier offering necessary.
- Safety and quality are fundamental basics of the Dura International program.
- “Multi-Stage” Q.C. process to ensure parts meet dimensional and weight specifications.
- Manufactured by ISO certified factories to meet requirements of fit, form and function.

ELECTRONIC CATALOGING

- Currently there are over 300 “part numbers” cataloged for 2009-2010 vehicles. (Activant 11/09)
- Timely updates via electronic communication with Activant and Wrenthead.
- Up to date cataloging increases sales opportunities.
- Current cataloging places Dura International customers ahead of its competition.

15 YEARS OF PROVEN QUALITY
